

Eco-OSS Partnership Meeting No. 1

NEWSLETTER 2

A more knowledge-equipped society is a better functioning society

„Open science is about giving people the tools they need to innovate and create a better future. Taking part in this project has opened our minds to a new world. We have met children and teachers from other countries, we have talked about open science and the aim of the project. It is very interesting to see many people, from different countries and traditions, with various ways of life who get together with the same purpose: to change at home what they can. After the meeting, we were aware of our task: to develop the project meant to improve or to solve the problems of our school or our community. Now we need other students to join us in order to accomplish our task. I am very happy to be a part of this project.” – student Brebu Damaris VII B grade.

NEWSLETTER 2

„From this meeting I have learnt that the common objectives and purposes of an innovation project can break the borders of European states and friendship is the most beautiful emotion which rises among the participants. Even though the first meeting was online, I have connected with the other teenagers in the project and we exchange opinions and thoughts through Instagram. I wish a big number of Romanian students could participate in such projects. What is obvious is that young students need fundamental innovation in science teaching in schools” Student Zamfir Anisia, VII C grade.
